Bibliography of Carl Peter Thunberg (1743–1828)

THE FATHER OF JAPANESE botany—the father of South African botany. These are two well-deserved epithets accorded to Thunberg as a result of his lasting scientific achievements. Carl Peter Thunberg, son of the book-keeper and merchant Johan Thunberg and his wife Margareta Starkman, was born November 11, 1743 in Jönköping. He attended school in Jönköping and began his studies at Uppsala University in 1761, where he studied medicine for nine years. He became a student of Carl Linnæus and defended his doctoral dissertation in 1767. Linnæus taught a new method of classification and nomenclature in botany, and he preached the necessity of exploring animals and plants from all parts of the world. Thunberg became his disciple *par excellence*. Due to the Kåhreanum scholarship, granted to him thanks to recommendations from Linnæus, the promising Thunberg was able to go abroad. In the autumn of 1770 he began his journey overseas. Via Copenhagen he went by boat first to Amsterdam and then to Paris, where he studied medicine at the largest hospital in the city, Hotel Dieu. He stayed in Paris for almost a year before he was asked by Johan Burman in Amsterdam to travel to Japan to collect seeds and plants for Dutch botanical gardens. He spent about eight years of his life (1771–1779) travelling to far-distant, exotic places like Japan, Ceylon and the Cape of Good Hope to study and collect botanical and zoological specimens.

On his return to Sweden, he taught at Uppsala University until the last years of his long life. He donated all the specimens collected during his journeys to the university museum in 1785 and was put in charge of the entire natural history collection. Thunberg spent the rest of his life sorting and classifying the most important parts of the collection. Thunberg's contributions to the botany of countries like Japan and South Africa are justifiably famous (Juel 1918; Karsten 1939–1946), and his most important books dealt with these topics, his *Flora Iaponica* and *Flora Capensis*. However, we should not forget his pioneering work in the fields of South African entomology and mammalogy, Asian ichthyology, as well as a large variety of other disciplines (Muller & Rookmaaker, *in press*; Rookmaaker 1988, 1989).

In 1784 Thunberg married Brigitta Charlotta Ruda (1752–1813), but the couple remained childless. However, they adopted two foster children, Brita Elisabet (1783–1860) and Per (1784–1835). Thunberg spent his old age on

his estate Tunaberg slightly north of Uppsala. He died on August 8, 1828 at the age of 85. Thunberg was the last of the Linnæans, and his selection of plants, insects and other zoological objects is enormous. His herbarium consists of almost 15,000 sheets and the insects amount nearly 25,000 specimens. He described 1,900 new species, and of these, 1,200 are still recognized. Other scholars have described almost five-hundred new species from the collections brought to Sweden by Thunberg. At his death he was a member of sixty-six foreign and domestic scientific or learned societies.

*Crede Deo, confide Deo, feret Ille Salutem,
quo non speraret tempore, fidus opem.*

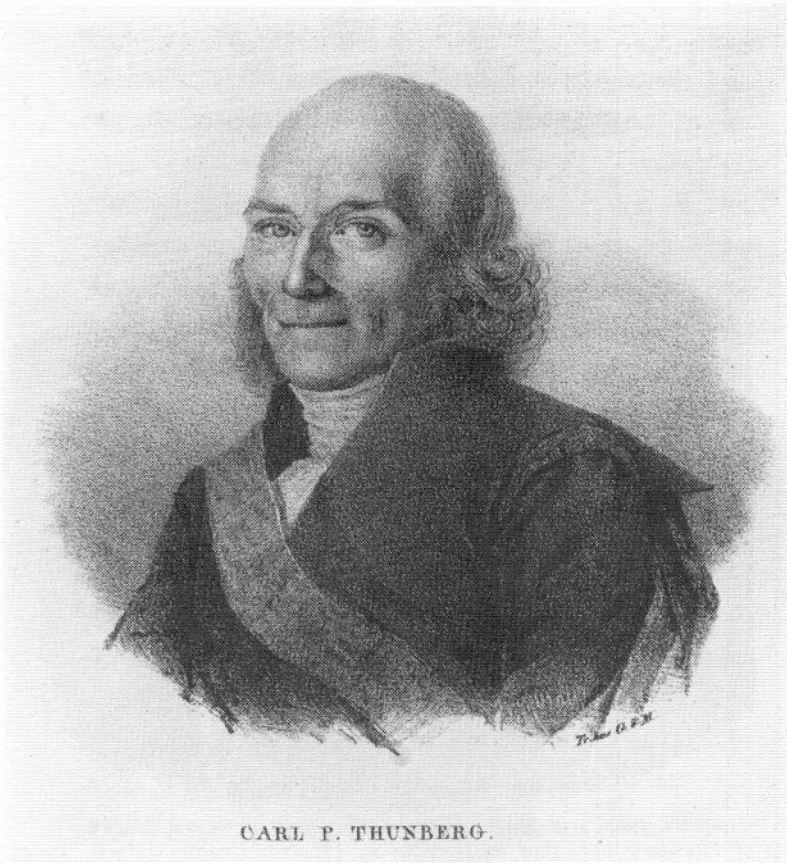

Carol. Petr. Thunberg.

A portrait with Thunberg's autograph and dedication to a student, December 12, 1816. The Latin sentence reads »Trust God and He will uphold you, when you least expect it«. Published 1828 in Magasin för Konst, Nyheter och Moden. Tidningsskrift, 5, Stockholm.

His enormous collection of manuscripts and letters (38 vols.), a gold-mine for everyone interested in studying science and international contacts during the Gustavian era, is preserved at Uppsala University Library. However, the definitive Thunberg biography remains to be written. Most scholarship on

Thunberg has emphasized his itinerary, especially the journey to Japan, but his life at Uppsala University is still not particularly well-known. The following publications provide some information:

Bibliography

Thunberg produced numerous writings in all his fields of interest, and yet a full and detailed bibliography of his books and papers has never been published. A few lists of publications were published during his lifetime or just after his death, but they are all much abbreviated and not always fully reliable (Thunberg 1790, Agardh 1829, Billberg 1832). Juell (1918), Krok (1925), and Karsten (1946b) listed his botanical works, and Hagen (1863) his entomological contributions.

We have personally verified all 584 titles in the present bibliography. This includes his books, lectures, papers and dissertations on all subjects, as well as translations and reprints. We have, however, only listed the items published

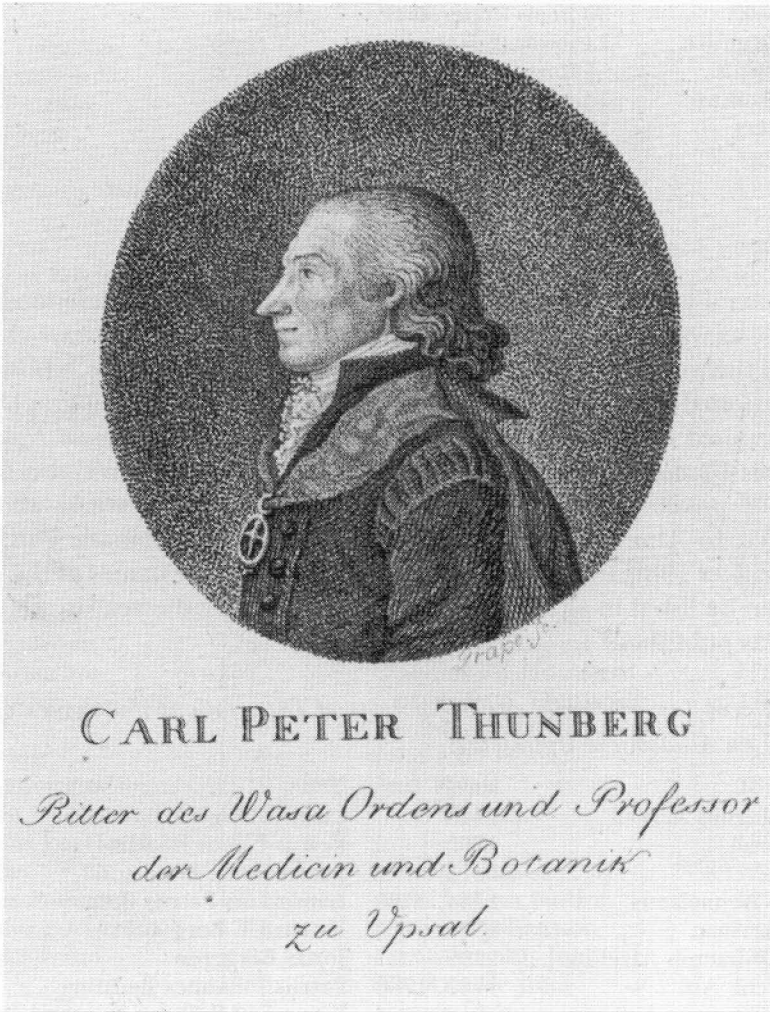

A portrait of Thunberg published in Bory de St. Vincent, Drapiez & van Mons, Annales Générales des Sciences Physiques, vol. 8, Bruxelles 1819-1821.

during his lifetime and have excluded any translations or reprints which appeared after 1830. The entries appear in a strictly chronological order. Individual volumes of one title which appeared in different years are therefore given separate numbers. The actual number of original publications comprised 500 books, papers and dissertations, 65 of which were translations and reprints. The breakdown is calculated as follows:

	Original	Translations and reprints
Separate Publications	12	15
Papers	194	40
Dissertations (incl. <i>Museum</i>)	294	10

His work was largely directed to an audience of specialists, and was written mainly in Latin (65 percent) or Swedish (25 percent). Many of his papers

A German etching published in *Journal für die Botanik*, Bd. 1 (Medicinalrath Schrader), Göttingen 1799.

consist of long lists of names of specimens, usually accompanied by a short diagnosis of each species. This makes much of what he wrote either inaccessible or uninteresting for the general reader. His range of subjects, however, was quite wide:

Botany	274 items (47 percent)
Zoology	135 items (23 percent)
Museum	61 items (10 percent)
Medical	36 items (6 percent)

Travel	30 items (5 percent)
Agriculture	14 items (2.5 percent)
Minerals	1 item
Agriculture	14 items (2.5 percent)
Others	19 items (4 percent)

List of Respondents

It is generally accepted that Thunberg wrote the theses defended by his students, as was customary at that time. Of course, it is not always clear how much of the work should or could be attributed to the students, whose names are mentioned on the title-pages. For the purpose of this bibliography, it has been assumed that the 233 theses and 61 parts of the *Museum Naturalium Academiae Upsaliensis* can be attributed to Thunberg only. We also feel that names of possible new species first published in these works should be attributed to Thunberg, not to the student or a combination of people (Rookmaaker 1989:151). For purposes of reference, the names of the respondents can be listed in alphabetical order (followed by the year in which their thesis was published).

Arrangement

All of Thunberg's publications are listed according to the year in which they appeared. Within each year, the titles are listed in the following order:

1. Books (separate publications), arranged alphabetically by title.
2. Translations and reprints of books, arranged alphabetically by title.
3. Short contributions to books by other authors.
4. Papers in journals (including translated papers), arranged alphabetically by the name of the journal.
5. Dissertations, arranged by date.
6. Issues of the *Museum Naturalium Academiae Upsaliensis*, arranged by date.

In the case of the dissertations and the similarly defended parts of the *Museum Naturalium Academiae Upsaliensis*, the entry starts with the title. This is followed in brackets by the name of the respondent and the date on which the thesis was defended. The entry concludes with the publisher and the pagination.
