HOLLAND AND HOLLAND, LIMITED,

8-Bore "Paradox" Elephant Guns.

(Registered)

"Neither of the 4-bores drove as well as the 8-bore 'Paradox,' with steel bullet."—CAPTAIN SWAYNE.

See page 37.

The great success of the 12 and 16-bore "Paradox" Guns has led us to turn our attention to the construction of 8-bores, built on the same principle, and shooting from 8 to 10 drams of powder, and a powerful solid or hollow bullet. They are also regulated for a special steel bullet coated with lead, which gives enormous penetration. Weight of these weapons, 14 to 15 lbs.

The advantages of the 8-bore "Paradox" over an 8-bore rifle, are:—

- I.—The weight is considerably less than that of a rifle.
- II.—It is much lighter forward, and handles and comes to the shoulder like an ordinary gun.
- III.—Gives a higher velocity and a greater penetration with the same charge of powder.
- IV.—Greater accuracy, as is shown in the following notices.
- V.—Can be used as a shot gun if desired.

We have supplied a number of these guns to some of our best big game sportsmen, and all the reports we have received speak in the highest terms of the accuracy and penetration of these weapons.

For Cartridges, see page 77. For Special Requisites for "Paradox" Gun, see page 78.

Winners of all the "Field" Rifle Trials, London.

8-Bore Bullet.
Full Size.

10-Bore "Paradox" Guns

For Rhinoceros, Bison, and other kinds of Large Game.

"Coming suddenly on the Rhino, fired at his heart, knocking him over on the spot."

"Five Months in Samalilova," by Lora Wolerton.

This powerful weapon is constructed to shoot 8 drams of powder and a heavy conical bullet, either steel coated with lead, or solid hardened bullet, and is chambered for the solid brass case, and for sportsmen who find an 8-bore too heavy for them, this is a most desirable weapon. It has enormous penetration, and at the same time is exceedingly accurate.

It is quite as powerful a weapon as most 8-bore rifles, besides having the great advantage of being a very handy well-balanced gun, weighing from 3 to 4 lbs. less than a rifle of the same calibre.

It is specially constructed and regulated to shoot either solid or lead-covered steel bullets for thick skinned animals, or a hollow-fronted bullet for other kinds of big game. Weight about 12½ to 13 lbs.

For Special Requisites for "Paradox" Guns, see page 78.

Awarded Grand Prix, Paris, 1900.
