“THE RHINOCEROS OF SOUTH ASIA” BY KEES ROOKMAAKER

Three species of rhinoceros once inhabited South Asia, two of which disappeared over a century ago. This survey aims to reconstruct the historical distribution of these large mammals resulting in new maps showing the extent of their occurrences. Thousands of sources varied in time and nature are used to study the interactions between man and rhinoceros. The text is supported by over 700 illustrations and 38 maps showing the importance of the rhinoceros in the scientific and cultural fabric of Asia and beyond.

This book can be viewed and downloaded free of charge online (pdf 889 pages, 143.8 MB): <https://brill.com/display/title/64767>
 Rookmaaker, Kees. 2024. *The Rhinoceros of South Asia*. Leiden, Boston: Brill (Emergence of Natural History, vol. 6), pp. i-liv, 1-835 (4to). With contributions by Joachim K. Bautze and Kelly Enright.

In the picture on the cover, full of flowers, colors and water, 13 archers and horsemen armed with shields assault a male rhinoceros with spears, arrows and braided manes from the front and back, with his left flank alone covered with some 15 wounds. The muskets aiming at a teen rhino hidden in the groves may soon turn on him, blocking his only remaining escape route. This anonymous painting, dating from 1690-1695, is the last surviving evidence of the presence of rhinos in the princely State of Raghogarh, now absorbed into the State of Madhya Pradesh.¹

RHINOCEROS RED CROSS SOUTH AFRICA

Rhino poaching is declining in Kruger Park, now Bunker Park, and spreading to other provinces, notably KwaZulu-Natal. But poaching is not the only pressure. The National Biodiversity Economy Strategy (NBES) project aims to “optimise biodiversity-based business potentials across the terrestrial, freshwater, estuarine, marine and coastal systems, and to contribute to economic growth with local beneficiation, job creation, poverty alleviation, and food security.” In the words of President Ramaphosa, biodiversity for local communities is currently as useful as “Rembrandt’s lying in the attic”. The NBES’s “extractivist” approach sees biodiversity as a mine and wants by year 2036 to multiply plant trade and bioprospecting, which involves the use of plants for pharmaceuticals and cosmetics, as well as to double and triple the consumption of antelope, zebra and crocodile meat. NBES also aims to increase financial resources from sport hunting and trophy exports. In 2022, the 6,000 hunters from the USA, Europe and other continents killed 36,500 wild animals, according to figures from the South African Guides and Hunters Union. To meet the financial targets for trophy hunting set by the NBES, 16,500 international hunters would be required by 2036, and thousands of elephants, lions, buffalo and white rhino legally killed. The economics of vision tourism are completely ignored.

On the subject of rhinos, NBES opens up a new avenue. The idea is to open the floodgates to “medical” tourism and encourage the world’s upper classes to come to South Africa for cures based on ground horn powder. This innovative approach, based on ancient prescriptions now disproved by traditional Chinese and conventional medicine, would make it possible to avoid listing rhinos in the CITES Appendices. Since horns are not legally exportable, the idea would be to bring to South Africa customers obsessed by the supposed preventive and curative virtues of horns, and keen to rejuvenate and boost their sexual activity.

NBES seeking to rally the voices of some rural communities and the rhino horn trade lobby, together with the voices of hunters and hunting guides, undoubtedly helped President Ramaphosa’s African National Congress party secure a relative majority in the May 29, 2024 general election.²

The rhinoceros in captivity: a list of 2439 rhinoceroses kept from Roman times to 1994. By L.C. Rookmaaker. Published at The Hague by SPB Academic Publishing. It lists all captive specimens of the five species of rhinoceros from Roman times to 1996. ISBN 9789051031348. Size 29 x 21 cm. 410 pp. illustrated

Also Published:

Guardian of the Crash: A young man's quest to become the Voice of the Rhino.

Paperback – 28 April 2024

by Suzanne Janeke (Author)

Guardian of the Crash is a remarkable and very personal journey between man and these magnificent beasts, both vulnerable to the circumstances of our time. It's a story about the voiceless finding a platform to speak out and a growing confidence to be bold when the opportunity presents.

Many thanks to everybody who has helped us by sending copies of books and papers, information, data, news, pictures, photographs – all shared across the globe.

DONATIONS TO THE RRC

It is really very easy. No problem to the audience of the RRC. To show appreciation of our work and to make future contents even better, a small donation goes a long way. Visits to libraries are no longer necessary, just think of the expensive time gained and research results improved. The button leads to a page with instructions.

The Rhino Resource Center is an essential tool for

- 👉 Information and image supply to media
- 👉 Academic research in biology, conservation studies, art history
- 👉 Education in primary, secondary and tertiary levels
- 👉 Conservation of rhinos both *in-situ* and *ex-situ*
- 👉 Latest information supply of all rhino-related projects
- 👉 Information on all the latest conservation efforts
- 👉 All the historical and most current literature.

YES, YOU CAN HELP:

- 👉 Authors of books, papers and reports can send us a copy after publication.
- 👉 We are always looking for images of all rhinos in books and in the wild
- 👉 We aim to include a picture of every rhino ever kept in captivity
- 👉 Contribute a message to our blog and get into contact with others
- 👉 Place a link on your website to the RRC which will be reciprocated
- 👉 Give us a DONATION when you feel the RRC has helped your work.

NEW LITERATURE (finalized 25 August 2024)

In this quarter (June to August 2024), we have added 100 new references, to bring the total number of items in the database to **28,770**.

Below I have listed all new entries since 2000 in four categories: General (all species), African rhinos, Asian rhinos and Fossil rhinos.

**Most additions are available on the website.
Search for them on the RRC, it's easy.**

Always check the [RRC website](#) first, many papers are available there.

Dr Kees Rookmaaker - Email: rhinorrc [at] gmail.com

Dr Kees Rookmaaker has actively worked on the biology and history of the rhinoceros for 50 years. He is a member of the IUCN-SSC Asian Rhino Specialist Group, and advisor to the EAZA Rhino TAG and to the International Rhino Foundation. Until 2023, he was the editor of the rhino section of *Pachyderm*. Author of twelve books on African and Asian exploration and on the rhinoceros, as well nearly 250 shorter publications, many in peer-reviewed journals. Until 2015, he worked as a Senior Research Fellow on [Darwin Online](#) and [Wallace Online](#) at the National University of Singapore. He was Secretary of the International Commission on Zoological Nomenclature (ICZN) for a short period in 2015. He served on the Council of The Society for the History of Natural History, which awarded him their Founder's Medal.
