

2017 Rhino Conservation Calendar

"Rhino dogs are frontline soldiers
trained specifically to save rhinos!"

The International Rhino Keeper Association (IRKA) is dedicated to sharing knowledge related to the five species of rhinoceros. Information gained through experience in managed care and studies in the field are viewed as critical to the rhinoceros' survival. To this end, the IRKA conducts the Rhino Keeper Workshop every two years to learn, share, and discuss the most up-to-date information in the fields of rhino biology, management, nutrition, and training. This is a membership-based organization that strives to both serve its members as they work to become the best care-takers and managers of the rhinos in their care and involve its members to participate in the Association's interests and growth.

Please visit the IRKA website www.rhinokeeperassociation.org or 'Like' us on Facebook, for information on next year's Rhino Photo Contest and Rhino Conservation Calendar.

Note: Due to the surge in the rhino poaching crisis, we are no longer sharing the exact location of the rhinos featured in this calendar.

The 2017 Rhino Conservation Calendar was assembled & edited by Sara Wunder Steward & Sean Ramsdell.

(In order: January-December, from top to bottom & left to right)

January: Gillian Lang, Luke Hausler, Kelly Douglas, Melle van Iperen, Dina Corrales
 February: Helen Rhodes, Julie Walter, Kim Negoro, Cydney Peterson, Pierre Lombard
 March: Shalini Babu, Nobby Clarke, Ellie Ray, Graeme Mitchley, Todd Cummings
 April: Alex Tweedie, Jessica Knauss, Jessica Lynn Logan, Cat Chase, Julie McGilvray
 May: Kaleb Balli, Kelly Ann Brown, Hilarie A Weiland, Chester Zoo
 June: Olivia Pugh, Jim Irwin, Jeff Dolan, Hans Janssen, Denise Wagner, Garry White
 July: Michael Moss, Rita Shaw, Suzan McKeever, Axel Tarifa
 August: Mike Veale, Danny Sullivan, Jane Kennedy, Helene Hoffman
 September: Megan Griffiths, Jennifer MacNaughton, Christy Nitz
 October: Loressa Clisby, Dina Cohen, Beth Astles, Craig Gilchrist, Jonny Edward
 November: Jim Michael, Geri Pepe, Brenda Gunder, Cassandra Kutilek, Karen Stiven, Alexandra Nichols
 December: Roy Lewis, Samantha Kerns Sassone, Jack Gradidge

StopRhinoPoaching.com was established in 2010 as a response to the escalating rhino crisis in South Africa. Their focus is almost entirely security orientated; the rangers, Anti-Poaching Unit, security and managers are the thin green line that stands between the poachers and the rhinos.

For more information about StopRhinoPoaching.com, please visit their website at www.stoprhinopoaching.com.

The International Rhino Foundation (IRF) is partnering with South Africa's StopRhinoPoaching.com to provide dogs trained to track poachers by following their scent in the bush, protect handlers and rangers, detect ammunition (which poachers often stash prior to a poaching event), and locate the horns of poached rhinos at road blocks and security check points.

Rhino dogs are frontline soldiers trained specifically to save rhinos. A well-trained dog and its handler are powerful weapons against wildlife crime. The dogs use their superior senses of smell, hearing, eyesight, and agility to sense and do things their human counterpart cannot. As poachers become more lethally armed, dogs provide a vital early warning system and safety for rangers, along with rhino protection. Rhino dogs are often blood hounds paired with Belgian Malinois trained to either track or attack suspected rhino poachers. The work these dogs do is invaluable to the conservation and protection of rhinoceros. For each \$5,000 we raise, we fund another rhino dog soldier and all of its training needs.

The International Rhino Foundation (IRF) is dedicated to the survival of the world's rhino species through conservation and research.

For more information about the IRF, please visit their website at www.rhinos.org.

At the start of the 20th century, 500,000 rhinos roamed the wild. By 1970, the worldwide population fell to 70,000. Today, only 29,000 rhinos survive in the wild. Rhino deaths in Africa may soon outpace births. Rhinos are poached for their horn, which is made of keratin—the same as your hair & fingernails. There is no scientific evidence that rhino horn has any medicinal value.

Black rhinos are not black. The species probably derives its name as a distinction from the white rhino &/or from the dark-colored local soil that covers its skin after wallowing in mud. They have a relatively broad snout with a prehensile lip adapted for grasping branches & leaves.

All of the photographs this month are of the last remaining Northern white rhinos on Earth. In 1960, there were more than 2,000 Northern white rhino remaining, however, poaching has led to their extinction in the wild. Now there are only 3 individuals left on earth living at the Ol Pejeta reserve.

Greater one-horned rhinoceros refers to the single large horn. The rhino is brownish-gray, hairless, with folds of skin that resemble plates of armor with rivets. They are grazers, but when not grazing on land, they like to immerse themselves in water, where they also graze on aquatic plants. They cannot, however, swim!

White rhinoceros is taken from the Afrikaans word describing its mouth: "wyd", meaning "wide". Early English settlers misinterpreted the "wyd" for "white". It has two distinct subspecies, but only populations of the Southern white rhino remain viable. (See the month of August for more information on the Northern white rhino.)

The International Rhino Keeper Association would like to thank the following sponsors for their generous support, which made it possible to produce the Rhino Conservation Calendar.

100% of the proceeds from the sale of this calendar will go towards rhino conservation.

We're thinking ahead and planning for the future. This paper was produced using environmentally-sustainable forest management practices.
