

## TO CORRESPONDENTS.

All communications intended for the Editorial Department should, in order to prevent delay, be addressed to "The Editor of the FIELD, Windsor House, Bream's Buildings, E.C.," and not to any person by name.

The writer's name and address are required with all letters. The sending of these particulars will not suffice to identify a sender, and a future communication from the same address will receive the same *sous de plume*. Letters and inquiries from anonymous correspondents will not receive attention.

Advertisements, notices, or papers, &c., should be addressed to the publisher, Mr. Cox, Windsor House, Bream's Buildings, E.C., and should be kept distinct from communications intended for the Editorial Department.

Scale of charges for Advertisements and the rates of subscription will be found at the foot of the fourth column on the preceding page.

## MISCELLANEOUS.

**BREVET.**—We regret that we are unable to recommend any particular firm.

## ANGLING.

**MACINTOSH.**—We doubt whether you can do better than Matlock Water, which is the headquarters of hon. secretary of the local angling association.

**X. Y.**—The river is free from pollution in that district, and there is no part where pollution is so bad as to be a nuisance of the kind you mention.

**J. J. MUSHRAVE.**—The Mundella Act is not all that it might be, but it provides for the punishment of those described as a *farce*. If the waters you mention are under the Act, then a person who has wilfully breached the law, and the offenders should be rigorously dealt with.

## ATHLETICS.

**INQUIRER.**—The Badminton volume Athletics contains admirable instructions on training.

## CANINE.

**INQUIRER.**—Capt. Hunt, 26, Southgate, Middlesex, has written to us, and all information can be had by writing to that address.

**CARLISLE.**—We have been recommended for coon hunting, but we do not know whether any have been sent over for the purpose.

**ED. ROSE.**—(1) Prunus acid, which can be dried and powdered; (2) chemicum, (3) An Irish Terrier makes a capital house dog, and would not be likely to be disturbed by the interlopers, as the other terriers, especially if introduced as a puppy.

**M. L. BROWN.**—There are such insects. We are not quite certain whether Spratts Patent, Henry-Atkins' Patent, or the like, will do the scurf, for which there is actually no prevention, except by washing. The best way is to keep the garment of the coat in the Non-Sporting, volume second, of Rawdon B. Lee's *Modern Dogs* (1900), by Horace Cox, Bream's Buildings, E.C.

**A. DE V. W.**—Discussions the other day, and give Fowles's solution of arsenic—ten drops once a day for a week—in the morning. The dose is to be increased to a good strong soup, without salt, thickened with bread-crumb. Medication should be discontinued for a time. Power in the hind limb may be restored as the natural reserves strengthen.

**H. B. COOPER.**—To bring the dog has to be obtained conditionally from the Board of Agriculture. The dog must be registered; the period of quarantine rests entirely with the Board, and is as long as the dog remains in the country (3). No, the dog has to be kept apart from others. (3) No, the dog is not fit to be a cord. (4) Yes, unless it is a muzzled. (5) You will obtain full particulars, and a form to be used, up to the secretary to the Board of Agriculture, Whitechapel, London, S.W. (6) The importation of dogs is not stipulated period of quarantine within the curtilage of the place stated, and if the place is not suitable, and the place is not suitable, your application will be refused.

## COUNTRY HOUSE.

**Zow.**—Baited traps are rarely used for either species by practical trappers.

**J. S. COOPER.**—We may refer you to a notice of an insect powder in our present issue.

**BIRMINGHAM.**—The majority of horses lie down at night, though some, especially thoroughbreds, seldom, if ever, appear to do so.

**A. JOYES.**—There do not work on the species. We can only suggest that the feed will over stimulate the bird, and the bird will have suffered from confinement.

**HAMMELIN.**—The only method is by a special diet, consisting of bran and pipe drains used. Poison is most objectionable, as the bodies putrefy and render the house unhealthy.

**BULLFINCH.**—The bird died from inflammation of the lungs due to the alteration from its natural diet and to confinement. The species is not long lived in captivity.

**WATERHORSE.**—One "sorrel" coloured horse is one which is rather darker than the others, and has a grey chestnut. The term was a name often used to describe the colour of the horse, and punches, which were usually chestnut.

**SURVEYOR.**—The water-wood you send (*Ulmus glabra*) is difficult to cultivate, especially in this season, because it has already developed a crop of spores which stick to the soil, and will germinate and grow into fresh plants. But if you attack it next season, when the spores are few, and before it develops spores, you will have a better chance with it. Water-wood is the best to keep the pest in check. If, however, you are necessary to eradicate it, you might find the appliances made by T. O. Newman, the manufacturer, useful.

## CRICKET.

It is possible to be 1 w to round the wicket bowling, if the ball is pitched far enough, or if pitched on the wicket, which, it breaks back so as to make for the striker's wicket.
