Reporting provided by :

Sumatran Rhino Protection Manager (Arief Rubianto), and
Javan Rhino Protection Manager (M. Waladi Isnan).

Material and information gathered from field reports and associated documents.

Executive Summary:

The decline of Sumatran and Javan rhino have been in process for a long periode of time. The Sumatran rhino PHVA (1993) calculated the decline of the Sumatran rhino is about 50% during the last decades. The SRCS, Singapore 2013 suggested the present countries not more than 100 While the Javan Rhino in Ujung Kulon shows an increase to 53-61 animals. This Sumatran rhino species will be extinct on the next decade if there is no appropriate, bolt, and serious management (Strategy and Action Plan for the Conservation of Rhinos in Indonesia 2007 – 2017). Rhino decline in South East Asia is due to a combination of habitat disturbances and reduction and over exploitation of rhino (most recently by poachers after the horn). Poaching pressure on wildlife in Indonesia continued to be high, calling to the need of consistent efforts on anti-poaching activities as it is practised by Rhino Protection Units. The method employed in poaching prevention is primarily in forms of field patrols to search for traps and other signs of poaching attempt, to destroy these traps, and to collect evidence to identify and apprehend the suspects involved. While in support to the field patrol, intelligence activities is operated to assist in the apprehension of poachers and identify the routes of illegal trade of protected animal parts (horn, skin, hooves etc.).

The Indonesian Rhino Protection Program of YABI integrates partners of governmental and non-governmental namely Directorate General of Natural Resources and Ecosystem Conservation of Ministry of Environment and Forestry (formerly name was Directorate General of Forest Protection and Nature Conservation of the Ministry of Forestry), International Rhino Foundation and World Wide Fund for Nature as well as local villagers . The program entails series of approaches that include: wild population protection by intensive patrolling of areas, to detect traps and arrest intruders, more intensive and extensive surveys and monitor of the rhino population, and intelligence operations to assist in the apprehension of poachers, and identify of routes used for illegal trade, and establishment of rhino database system using the Geographic Information System (GIS) techniques, and to a limited scale conducting community development to some villages fringing the national parks.

The Indonesian Rhino Conservation Program (that was originated from GEF Project and that is now has merged into YABI) and Rhino Protection Program of YABI fully understood that the program is very costly. Hence, it is important to bring an understanding that the operation of Rhino Protection Units (RPUs) backed-up by Intelligence and Law Enforcement Unit (ILEU) is the most effective measure in protection of rhinos in the wild. Therefore it is important in securing a simultaneously funding plan for sustainability of rhino conservation program.

Introduction

The decline of both species of rhinoceros, Sumatran and Javan, has been in process for a long time. The population of Sumatran rhino have reduced to 50% in the last decade and will be extinct for the next decade if there is no serious and appropriate management of rhino. Its decline in range and number in Sumatra is attributed chiefly to fragmentation and disturbance of its habitat through indiscriminate forest clearance and to poaching, stimulated by the illegal trade in horns, hides and hooves, and other parts of rhino's body.

A population and Habitat Analysis conducted in November 1993 in conjunction with the IUCN SSC and its Conservation Breeding Specialist Group (CBSG) and the AsRSG has revealed a significant decline in the numbers of Sumatran rhino in Indonesia. Whereas the estimated rhino population has been decleaning as follow : 400 – 700 (van Strien, 1985) ; arround 200 or between 215 – 319 (PHVA, 1993); 215 – 380 (GEF Project, 1994). Meanwhile SRCS meeting in Singapore 2013 suggested that number of Sumatran rhino is not more than 100 animals.

During 2015, by using 100 video traps, The Park Administration (Balai Taman Nasional of Ujung Kulon) had identified 63 different individual of rhinos in the peninsula, whereas 1 offspring have seen among those rhinos. The Park also encountered 4 natural dead rhinos, which no evidence of poaching causing their death. Whilst, in the Javan Rhino Study and Conservation Area (JRSCA), YABI team had been identified 3 different rhinos reside the area.

Although the Javan rhino population in Ujung Kulon National Park seems to be holding at about 60-62, yet the threat of poaching remains.. The loss of rhino has become a matter of global concern which also is for Indonesia. The loss of at least one rhino due to poaching in Ujung Kulon (1994), and the suspect has been identified but no prosecution has in progress at that time remains as an alarm to us to be always be in alert. Although rhino poaching evidence and attempt was not found during this quarter, poaching of other wildlife such as trapping of mouse deer, bird, as well as poaching for marine resources (crabs, langusts, clams, etc.), and usage of fish poison were still occurring.

Saving the remaining rhino population requires series of efforts such as to support rhino patrol and strengthening its anti-poaching activities such as working with local in finding ways on alternative livelihood until poacher activity and habitat destruction is reduced to the point of elimination.

The Protection Programs of YABI provides protection from poaching and habitat disturbance for viable nucleus populations of Sumatran and Javan Rhinos in forms of establishment and operation of 16 Rhino Protection Units, supporting management, coordination and supervisory structures. RPUs continued their operation in and surrounding areas of Bukit Barisan Selatan (7 RPUs), Way Kambas (5 RPUs) and Ujung Kulon National Parks(4 RPUs) The RPU BBS, WK and SRS personnels had been taking an important role on the establishment of 3 RPU Kutai Barat to evacuate sumatran rhino. These units have been supporting the development of 3 new units which were inaugurated in March 10th, 2016 for the continuing of rhino evacuation in East Kalimantan.

Objectives

The objective of the Program is to contribute to the long-term viable conservation and management of Indonesian rhinos (the Javan rhino – *Rhinoceros sondaicus*, and the Sumatran rhino – *Dicerorhinus sumatrensis*) and their habitats in Java and Sumatra.

The Indonesian Rhino Protection Program of YABI is itself addressed to support the capabilities of the Directorate General of Conservation of Natural Resources and Ecosystem (formerly was Directorate General of Protection and Nature Conservation) under the Ministry of Environment and Forestry (formerly was Ministry of Forestry) with its associated wildlife agencies in arresting and reversing the decline of rhinoceros due to poacher activities and habitat disturbances toward the national and global goal of recovery of viable populations of rhino species in Indonesia.

Output

1. Establishment and operate of at least 16 Rhino Protection Units (RPUs) in Sumatra and Java.
2. Establishment and operate Intelligence and Law Enforcement Unit to support law enforcement process which is undertaken by RPU and Park authority or proceed to identify information of threats from ILEU's informants for further judicial process. .
3. Community facilitation for better livelihood and to reduce threats from surrounding community.

Progress

The Rhino Protection Program of YABI providec protection from poaching and habitat disturbance for viable nucleus populations of Sumatran and Javan Rhinos through the establishment and operation of Rhino Protection Units (RPUs), and supporting management, coordination and supervisory structures. The outcome of operations of 7 RPUs in Bukit Barisan Selatan National Park (BBS NP), 5 RPUs in Way Kambas National Park (WK NP) and 4 RPUs in Ujung Kulon National (UK NP) and the addition of 1 unit of Community. is reported as seen in Annex 1 . (*RPUs Activities Report Periode January-March 2016.*), as per attached.

The achievements of the Protection Program for this period is Deccribed below in *Annex 1*. Records on illegal killing of animal and other forest offences detected by both RPUs (BBS, WK and UK) and ILEU is shown in *Annex 2*.

The field days per month of RPU's personnel is shown in Annex-1. In this annex, indicated that **RPU BBS had been successfully performed fieldday per person per month 17.23**. Whilst the oother area were 15.43 in WK and 17.63 in UK.

The Illegal activities encountered in BBS, Wk and UK during this quarter has decreased if compared with the previous quarter.

Intelligence and Law Enforcement Unit (ILEU) has been operating to identify the threats that came from the surroundings people or outside of the Park; its operations also covers identifying possible community development facilitations for raising local's alternative income in order to reduce threats to the park and its rhinos . There are only 3 personnel in this unit that have to work in collaboration with informants, RPUs, Park Rangers and the Police, in the case that they have a confirmed case and that have to apprehend the suspect/s for further law enforcement efforts. Although ILEU's is based in BBS and surroundings, they are available to assist ILEU operations in both WK and UK NPs.

ILEU's findings of their activities as well as its activities together with RPU BBS findings, is reported in Annex-2,

Base on the request from WWF Indonesia, YABI has been deploying staff to joint a collaborative team to evacuate sumatran rhino in Kutai Barat. Some members of RPU BBS, RPU WK (12 personnels) and SRS (1 Veteriner and 1 keeper), have been performing their important role in carrying out the task of the team, by way of :

- o Patrol to detect any threats to the rhino and habitat. They'd found and inactivated 42 nylon/wire snares.
- o Survey to find the rhino and their tracks.
- o Survey the area to install 3 pittraps.
- o Build Boma, when 1 rhino "Najaq" was trapped.

The rhino "Najaq" had been saved from a traditional poaching and captured by a collaborative team (Provincial Nature Conservation, RPU-YABI, WWF, Local People) on 13 of March 2016 , was dead on 5 of April 2016.

The rhino population in whole Kalimantan is still unknown, while traditional poaching pressure for rhino and other wildlife is contigously horrifying.

Picture-1 :
Rhino "Najaq" captured by the collaborrative team in Kutai Barat District.

Conclusions and Recommendations

In this period, the average number of days per person per month is better than the previous quarter, as evidenced by the achievement of the field team averaging more than 17 working days per person from achieving the target of 20 working days.

During this period, the RPU BBS has operated primarily to patrol the area of the National Park. They reached an everage of 17.23 day of field work per person per month as a result of 36 patrol / survey (from a total of 44 their activities). The other activities were mostly contributing to the multi-party program that was facilitated by BBS NP.

During their patrol along the national park, RPU BBS had detected animal huntings, illegal loggings, bird thefts, encroachment and some other disturbances.

This patrol/survey covered 915.26 Km of walking. A total of 43 cases of illegal activities and no rhino poaching evidence.

Figure-2 : RPU BBS encountered a carcasses of elephant in Biha .

Figure-3 : There was still illegal logging encountered in BBS.

In total of 40 activities were conducted by RPU WK during this quarter (01 April -30 June) of the year and among of them were 40 activities of patrol/surveys, , field-days **15.43** days per person per month. Of their patrol activities, they engage in cooperation with the National Park Administration.

During their patrol along the national park, RPU WK had birds, poaching, illegal logging, forest fires, illegal grazing and some other disturbances.

This patrol/survey covered 2.790 Km of walking. A total of 60 cases of illegal activities and no rhino poaching evidence.

Figure-4. RPU WK inactivated a snare for wildpig.

Figure-5 RPU-WK detected signs of after fire.area.

RPU UK has achieved field-days 17.63 per person per month as the result of their 16 patrols / surveys as their total activities, which achieving 1.405 Km patrol route.

A total of 47 cases of illegal activities were detected and of which one case of blast fishing vessels and major cases facing is non mammal hunting (birds, fish / shrimp, honey, deer). Bangkonol blocked and forest fires caused by illegal honey hunter

Figure-6 . RPU UK detected signs of bird trapping .

Figure-7 . RPU UK inactivated a trap for mouse deer.

RPU has found many rhino footprints in BBS, WK, UK in the year 2016 but could not be used to determine the number of rhino population in the area, the RPU can only show the distribution of rhino in a region.

The rescue operation for Kalimantan rhino has to be continued in a safety manner, since there are small populations survive in East Kalimantan area.

In addition to the basic Patrol / Survey task, RPU also help to perform an operating activities under the joint command of the national park. RPU always work in coordination with the Head of the National Park.

As remained in the PVA workshop for sumatran and javan rhinos (February,2016), for the foreseeable future the viability of all remaining rhino populations will depend on complete protection from poaching

YAYASAN BADAK INDONESIA - YABI

ANNEX 1

QUARTERLY ACTIVITY
AND PERFORMANCE REPORT

01 April – 30 June 2016

2nd QUARTER (Q2)

BUKIT BARISAN SELATAN
NATIONAL PARK

Highlights

- The RPU BBS able to performed **17.23** field days per-person per-month in **993** days and 1.114 km distance.
- During the 36 patrol / survey, encountered 56 independence signs of rhino, 1 direct sighting.
- Total of 43 cases of illegal activities were encountered. The major cases encountered were non mammal hunting.
- Found **carcasses of elephant** in Biha (11/05) and Mahnai lunik (20/05).

BASIC POPULATION PARAMETERS

Number of Footprints case	Number of Locations with rhino signs					
	Footprints	Wallows	Feces	Feeding	Other Signs*	Direct Sighting
14	19	25	5	3	4	1

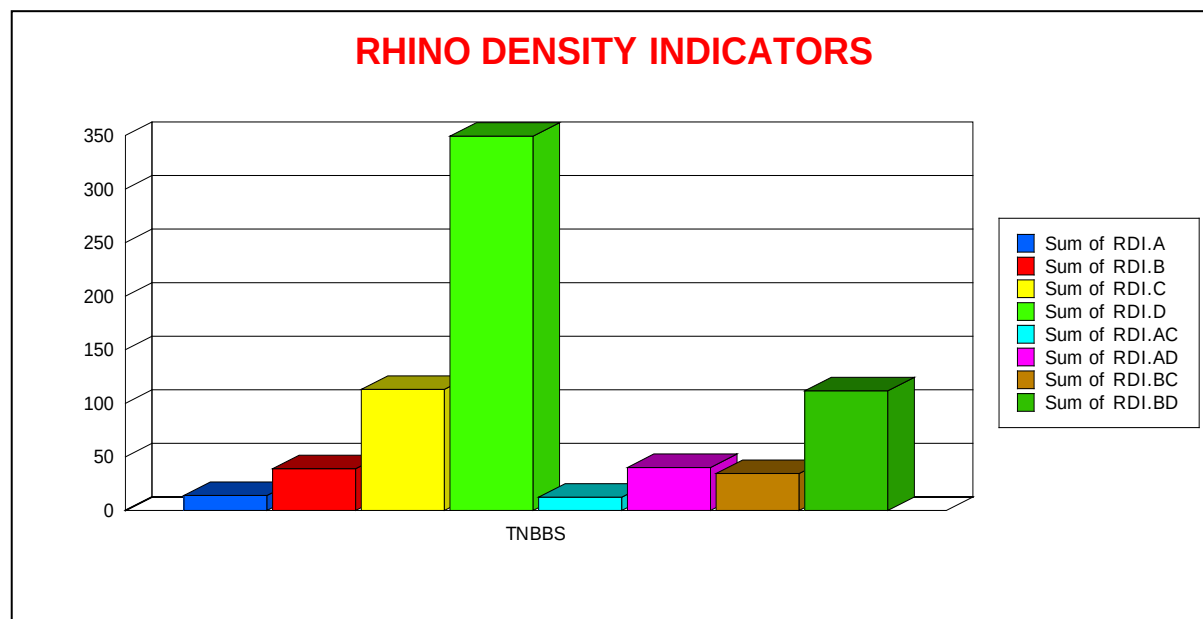

* Include Urine, Scratches, Rubs.

During the 36 patrol / survey, encountered 56 independence signs of rhino, 1 direct sighting.

RHINO DENSITY INDICATORS

Rhino		RPU Field Presence		Density Indicators			
A	B	C	D	A/C	A/D	B/C	B/D
Number of print locations	Number of Rhino Signs*	Field Days**	Distance Walked** *	Rhino prints/ 100 days	Rhino prints/ 1000 km	Rhino signs/ 100 days	Rhino signs/ 1000 km
14	39	113	349.31	12.39	40.08	34.51	111.65

* The total number of sign (excluding footprints) of rhino found. ** Total number of RPU group field days. (Footprints are not included, because the number provided in the table is the number of individual footprints and not the number of seprate tracks).

ILLEGAL ACTIVITIES ENCOUNTERED

Gaharu * Theft	Encroachment	Timber Theft	Forest Product Theft	Illegal Hunting		
				Rhino / Trap	Non Rhino (Mammals)	Other
0	16	3	0	0	2	22

* Gaharu (a component for incense) theft is listed separately, because it is a major threat in any forest in Indonesia

In BBS NP, during the 36 surveys/patrols, a total of 43 cases of illegal activities were encountered. The major cases encountered were non mammal hunting, then followed by encroachment.

Record of cases as per what is attached in Annex – 2, which include : date of incidence, date of detection, type of offences, place of occurrence, evidence (forest / wildlife produces recovered, Arms /other evidence, suspects, legal status and comments.

ANNEX 1

QUARTERLY ACTIVITY
AND PERFORMANCE REPORT

01 April – 30 June 2016

2nd quarter (Q2)

RHINO PROTECTION UNIT (RPU)
WAY KAMBAS NATIONAL PARK

Highlights:

- The RPU WK able to performed field days per-person per-month **15.43**
- During the 40 patrol / survey, encountered 79 independence signs of rhino, 1 direct sighting.
- 60 cases of illegal activities were encountered., mostly non mammal hunting.
- Arrested 3 suspects of elephant tusk pipe trader, SPBU Labuhan Ratu, on June 2016.
- Signs of an illegal logging with evidence 52 pcs of sawn timber.
- Inactivated 3 snares for wildpig in rawa bunder and susukan baru
- Training on SMART patrol , May 2016.

BASIC POPULATION PARAMETERS

Number of Footprint case	Number of Locations with rhino signs					
	Footprints	Wallows	Feces	Feeding	Other Signs*	Direct Sighting
16	32	11	10	11	15	1

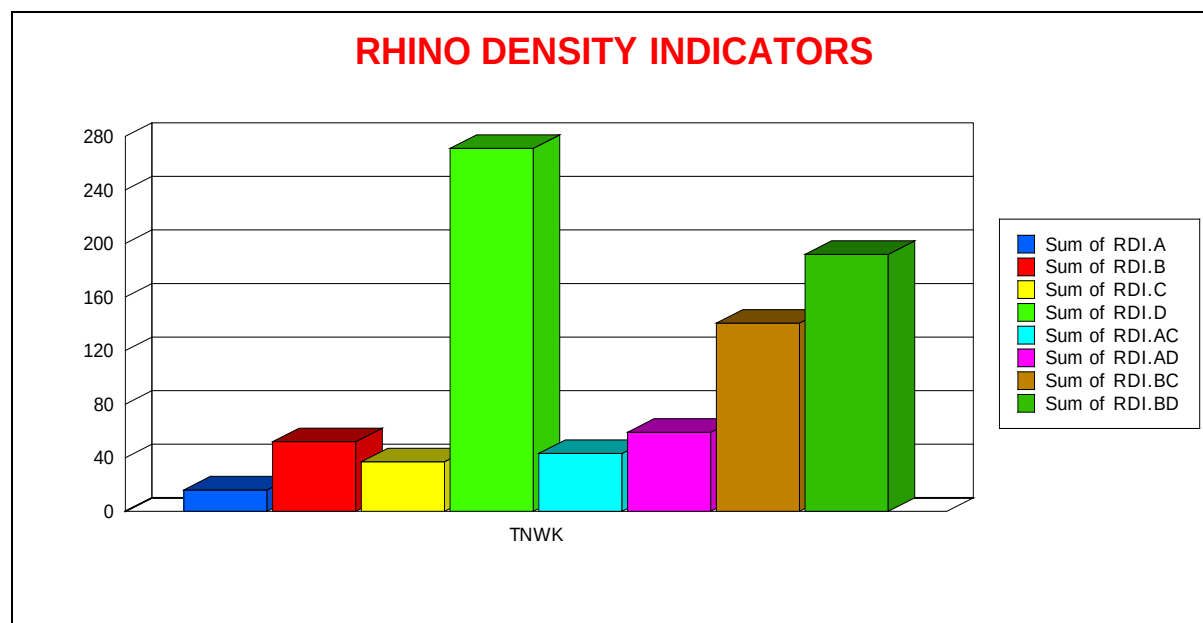

* Include Urine, Scratches, Rubs.

During the 40 patrol / survey, encountered 79 independence signs of rhino, 1 direct sighting.

RHINO DENSITY INDICATORS

Rhino		RPU Field Presence		Density Indicators			
A	B	C	D	A/C	A/D	B/C	B/D
Number of print locations	Number of Rhino Signs*	Field Days**	Distance Walked** *	Rhino prints/ 100 days	Rhino prints/ 1000 km	Rhino signs/ 100 days	Rhino signs/ 1000 km
16	52	37	271	43.24	59.04	140.54	191.88

* The total number of sign (excluding footprints) of rhino found. ** Total number of RPU group field days. (Footprints are not included, because the number provided in the table is the number of individual footprints and not the number of seprate tracks).

ILLEGAL ACTIVITIES ENCOUNTERED

Gaharu * Theft	Encroachment	Timber Theft	Forest Product Theft	Illegal Hunting		
				Rhino / Trap	Non Rhino (Mammals)	Other
0	13	4	0	0	21	22

* Gaharu (a component for incense) theft is listed separately, because it is a major threat in any forest in Indonesia

In Way Kambas NP, during the surveys and patrols a total of 60 cases of illegal activities were encountered., mostly non mammal hunting.

Record of cases as per what is attached in Annex – 2, which include : date of incidence, date of detection, type of offences, place of occurrence, evidence (forest / wildlife produces recovered, Arms /other evidence, suspects, legal status and comments.

ANNEX 1

QUARTERLY ACTIVITY
AND PERFORMANCE REPORT

01 January – 31 March 2016

2nd quarter (Q2)

RHINO PROTECTION UNIT (RPU)
UJUNG KULON NATIONAL PARK

- The RPU UK able to performed field days per-person per-month 17.63 .
- During their 16 patrol/survey , encountered 110 independence signs of rhino, 3 direct sightings.
- Direct sighting of rhino of 24/23 cm footprint size, out side of JRSCA border, on May and June of 2016.
- 47 cases of illegal activities are detected, the major cases were non mammal hunting (birds, fish / shrimp, honey).
- Inactivated snares for mouse deer and wild chicken.
- Training on SMART Patrol., 19-25 June 2016

BASIC POPULATION PARAMETERS

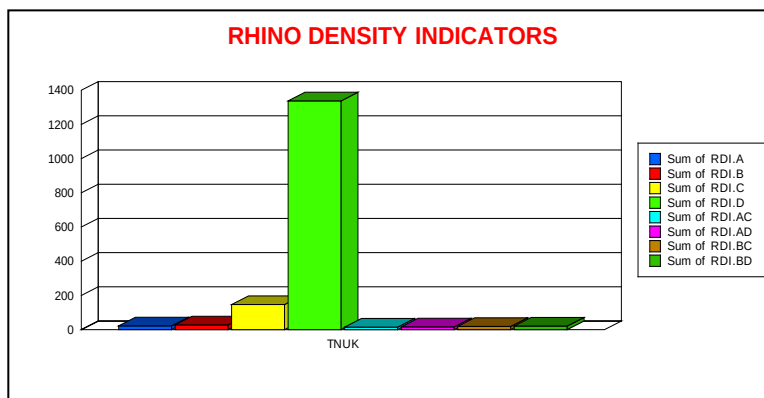

Number of footprint case	Footprint	Wallow	Feces	Food	Other Signs	Direct Sighting
22	43	6	19	42	0	3

* Include Urine, Scratches, Rub

Over 16 patrols / surveys in this period, encountered 110 independent signs of rhino, 3 direct sightings/.

RHINO DENSITY INDICATORS

Rhino		RPU Field Presence		Density Indicators
